

Version v1.0.4 - Released on 7/21/2014

- Removed Engine Shutdown Override

Version v1.0.3 - Released on 12/13/2013

- Added alarm messaging with CDM

Version v1.0.2 - Released on 10/07/2013

- File naming structure changed to HMI_516_V.1.0.2.zip
- Removed request for Engine Hours as the BASIC CDM already requests that information. Engine hours will still be logged to RECORD.CSV along with current fuel level and DEF level every 3 minutes.
- Removed datalogging of BASIC CDM parameters.
- Fixed inadvertent instantaneous selection of language or brightness menu if region held after 2 second lock out on menu selection screen.
- Updated language menu to include display of current software version in lower left corner.

Version v1.0.1 - Released on 8/22/2013

- Modified touch region to enable splash screen selection to 32x32 region in lower left corner.
- Added engine hours request and datalogging.
- Updated datalogging to capture BASIC CDM parameters.

Version v1.0.0 - Released on 7/25/2013

- Added C code scripting of display states.
- Added splash screen support.
- Added multiple language support.
- Updated datalogging for DEF level and Fuel level to capture at 15 second intervals.
- Increased brightness range from 10% to 100% in 5% increments and 1% to 9% in 1% increments.
- Changed splash menu to show unselected check box next to unselected splash screen.
- Changed splash menu to show border for touch regions.
- Changed brightness icon to match menu icon for brightness.
